

Science Double & Triple Award

All students will embark on the science Double Award course in Year 9. The topics covered are common to both the Double and Triple Award. Those students who show good work ethic and high academic achievement will study more challenging topics as they continue into Year 11 and will work towards the Separate Science examination entry or Triple Award. Students who would find this course difficult will spend Year 11 consolidating and improving their understanding of the Double Award work they have completed so far and will work towards a double GCSE examination at the end of Year 11.
